

at least about 0.5 weight percent of an insolublizing agent and said cationic copolymer is soluble in tap water.

9. (Amended) A fibrous substrate comprising:

fibrous material; and

AH Contd  
a binder composition for binding said fibrous material into an integral web, said binder composition comprising a triggerable cationic copolymer containing quaternary ammonium groups, wherein said cationic copolymer is insoluble in a wetting solution containing at least about 0.5 weight percent of an insolublizing agent and said cationic copolymer is soluble in tap water.

---

11. (Amended) A wet wipe comprising:

AF  
a fibrous material;

a binder composition for binding said fibrous material into an integral web, said binder composition comprising a triggerable cationic copolymer containing quaternary ammonium groups; and

said fibrous material being wetted by a wetting solution containing at least about 2 weight percent salt, wherein said triggerable cationic copolymer is insoluble in said wetting solution and said triggerable cationic copolymer is soluble in tap water.

---

19. (Amended) A wet wipe comprising:

AF3  
a fibrous material;

a binder composition for binding said fibrous material into an integral web, said binder composition comprising a triggerable cationic copolymer containing quaternary ammonium groups; and

said fibrous material being wetted by a wetting solution containing at least about 0.5 weight percent of an insolublizing agent, wherein said triggerable cationic copolymer is insoluble in said wetting solution and said triggerable cationic copolymer is soluble in tap water.

---

Please add the following new Claims 22 and 23 as follows:

---

22. (New) The nonwoven fabric of Claim 8, wherein said triggerable cationic copolymer contains monomer units selected from acrylate or methacrylate.

AA 23. (New) A nonwoven fabric comprising fibrous material and a binder material, said binder material comprising a triggerable, permanently cationically charged copolymer that retains its cationic charge independent of pH, wherein said cationic copolymer is insoluble in a wetting solution containing at least about 0.5 weight percent of an insolublizing agent and said cationic copolymer is soluble in tap water.
